CLASSIFIED BY: DIA (PT)
DECLASSIFY: DADR

Site involved a group of structures aligned along a flat "street"-like structure; it reminds me of a military installation, in that its structures and buildings are functional rather than aesthetic in design. The complex is very technical, with many subelements, systems and equipment. Complex is military/science related, with less emphasis on any direct military tie-in. Setting is dimly lit and may be cold and somewhat snowy. Inside at least one of the structures are objects that are dense, solid, massive, shiny, metallic, rounded, with flat and square parts that suggest machinery. Inside B-110 is something that is rounded, large, tapered, solid, revolving, and rotating. "Finding" is an associated concept, as is equipment, expensive, fine-tuned, and intricate. The structure provides exterior structure for this equipment. The roof of the structure has a long, flat, raised portion running down the center from end to end. There are large areas of large, corrugated metal and masonry. There is an "industrial" feel about the place, though not in the specific sense of factory or manufacturing plant. Inside the structure is a large, long open area, as if the structure were just one large open bay. There are continuous humming/whining noises and equipment sounds. Sounds like equipment--large motors driving something continuous, which goes on steadily for a long time "like" maintaining continuous RPMs. Sense of putting something together, or manufacturing in a specialized, limited sense. Control is very precise and "secure"--a prototype or few-of-a-kind production for specific applications and purposes. Production equipment and item produced are out-sized--larger than average, requires lots of space and large, voluminous, long, structure to accommodate. Cylindrical object turning slowly as if on an axis for access of workers. Idea of "assembly line," where item is moved for more efficient working on it. In this case it is rotated, rather than actually moved anywhere. There is a sense that B-110 can be opened up for ingress/egress on large scale. There is further here a large, vertically oriented rounded, smooth, tapered, grey, fluted metallic object. Dimensions of objects involved seem very large for what's involved. Elsewhere similar facilities and equipment exist for more mundane purposes. This is "like" a very large-scale version of other similar equipment with proportionately enhanced capabilities. Sense of being foreign, perhaps Soviet. Terrain in the area is generally flat, though somewhat uneven--it has an arid quality about it. Reminds me of central Asia, though not really desert. Various structures in the "facility" or "compound" vicinity, normally long and oblong in shape. This facility has been here for a long time, and has served as the home for many projects, but at least some structures involved with the present project of interest are new or extensively renovated recently. Interesting things in general happen here: a sense of a place for "trying things out." Experiments, test runs, space-connected things. Terrain and landscape remind me of Ft. Ord area, to include a large body of water in the immediate vicinity.

Interior Summary.

Scene is a group of structures aligned alongside a road-like structure. With a functional feel about them in a dimly lit setting that may be cold & somewhat snowy. Inside at least one structure ~~as~~ is/are object(s) that is/are dense, solid, massive, thin, metallic, rounded w/ flat & square parts that suggest machinery.

equipment such as

sets such like equipment - large motor driving something continuous, goes on steadily for long time. "Like" maintains continuous RPMs. Sets of many parts. But fairly place outside of normal manufacturing center & location. Specialized manufacturers. Central very precise; scarce; "like" prototype a few-of-a-kind production for specific application & purposes. Production equipment & item produced are out-sized - larger than average; requires large space & large, columnous, long, structures to accommodate.

Cylindrical
turning ^{slowly} as it is
an 8 x 15
for access &
workers

Such - idea of "assembly line", where item is moved to for more efficient working on it.

Inform Summary

I'm inside a large interior space which is occupied by cluster of specialized ^{metallic} machines, cables, lights etc., and one long round table that is turning/rotating so people can work with it.
